

# Plants for Pollinators

## Attract Beneficial Insects, Bees, Butterflies, and Hummingbirds

Pollinators such as insects, bees, hummingbirds, and butterflies are attracted to plants that have bright and vivid colors like red, yellow, and blue. Most plants that attract pollinators have faint scents and long, narrow central tubes. These plants have high concentrations of nectar and pollen that allow the pollinators to visit more individual flowers.

### For Insects:

- Black-Eyed Susans
- Cosmos
- Dill
- Goldenrods
